

First thing to do is Connect your laptop to Cable in PCIT room 21. It will use a USB port.

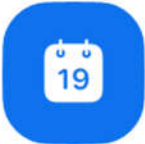

Start your meeting as usual.....

Make sure the video in zoom is using “Cam Link 4k” (see below) ...

Also I recommend that you don't use a virtual background with your zoom session

## Make sure the Microphone is connected to “Same as System (Digital Audio Interface (Cam Link 4k))

One thing you might want to use is a wireless headphone with a cell phone so that you can take a call from the 3<sup>rd</sup> party who is viewing the PCIT session. And only use the right side of the headphones. This will allow you to have PCIT headset on and be listening to what's going on in room as well as talking to client in room....in your other ear you will be hearing instructions from 3<sup>rd</sup> party. You can record the zoom session directly on your laptop and/or be recording the PCIT session onto flash drive as well (sort of a backup method of recording). We do have some extra wireless headphones (earbuds) that you can use with your phone if you need them. Also I recommend that you practice ahead of time so that when you start session you know what to do and it's like second nature to you.
