

Attention all Goto app users (on cell phones)

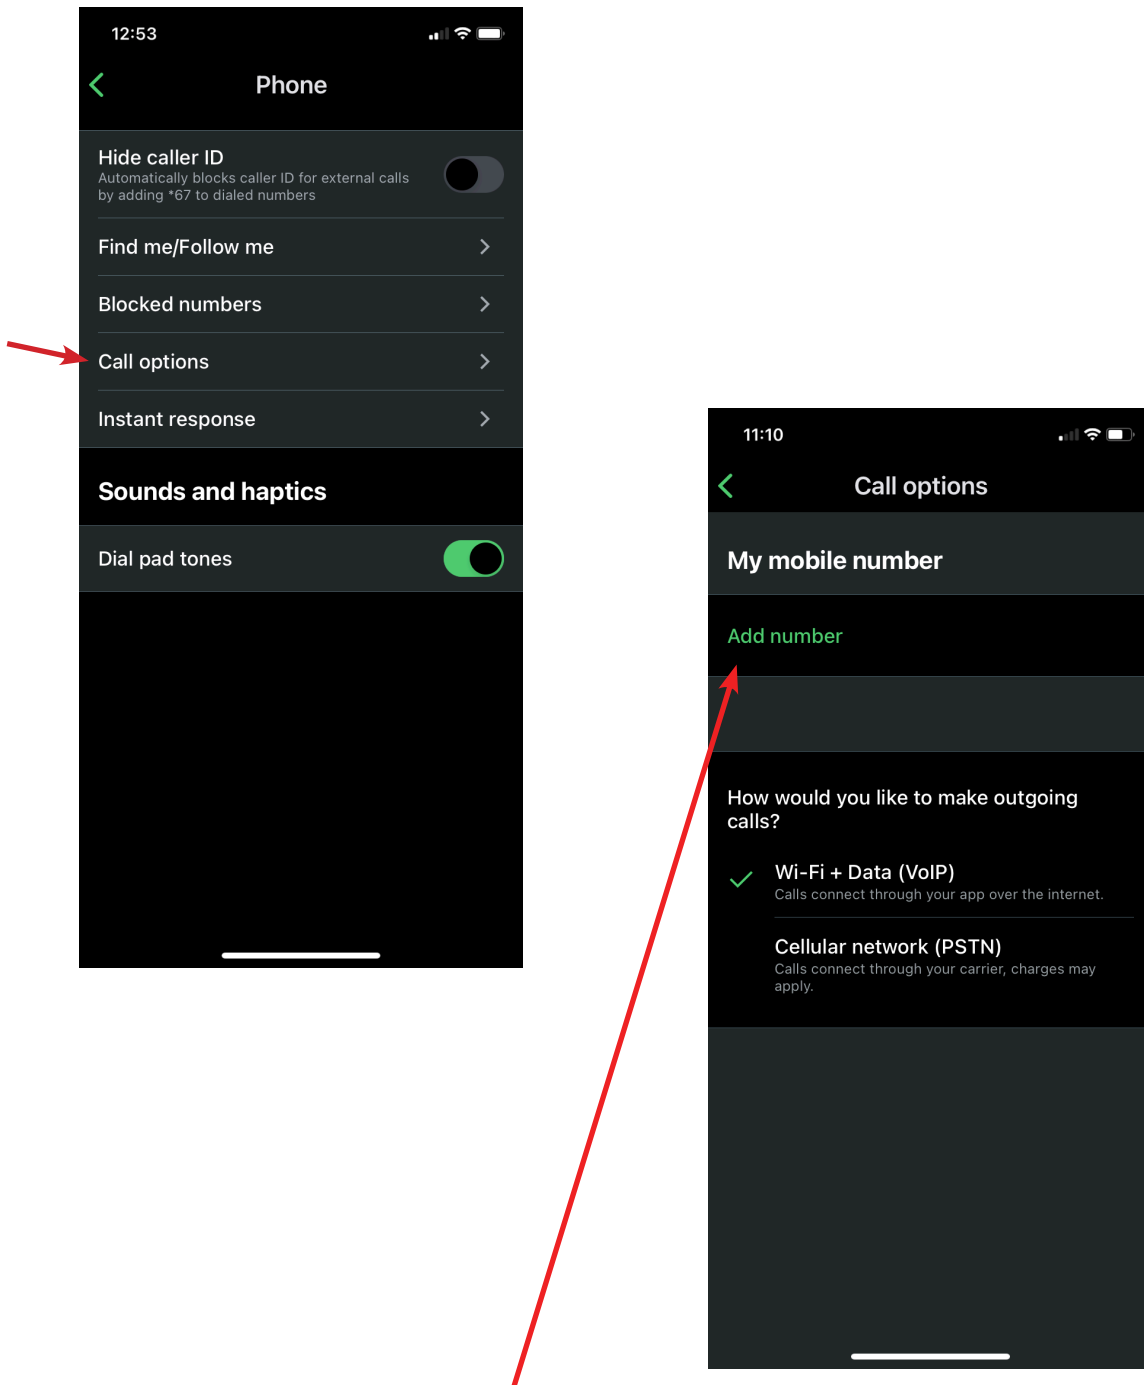

I've heard some feedback that some people have been having issues with their Goto App. With these instructions you can switch it over from a Wifi network to the cellular network. On the 2 people I tested this with, they reported having less issues with Goto after we made the change. This is not a guarantee that it will work better for you but it is an option for you to try.....

1.) In the Goto App, go to the Phone area and click on the circle that has a silhouette of a person.

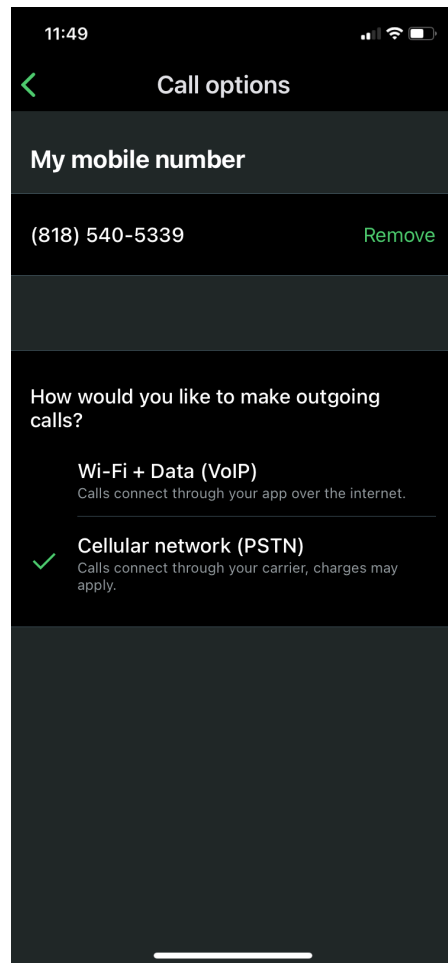

2.) Click on the Phone area.

3.) Click/Press the Call Options area

4.) Add the number of the cell phone that Goto App is on and click or press on “Cellular network (PSTN)”

5.) Once you've added your cell number and clicked on Cellular network it should look something like this, except with your number not my number.

6.) You should be set. Now when you try to call a number, or extension, it will say something like below where it says “Call 1 (833) 213-1096. This is normal. On the other end it will show the call is coming from you... It just uses this 1 800 number to make the call. You would click/ select on Call +1 (833) 213-1096 and it will make your call. Thanks. Let me know if you have any questions.
